Mobile App Development:-

1. pubspec.yeml:-

pubspec.yeml is a configuration file used in Flutter projects. It contains metadata about the project, including the app's name, version and dependencies. i

2. Dependency:-

A dependency in mobile app development refers to an external package, library or module that the app relies on to function. i.e using Google in WhatsApp for live location.

3. Gradle:-

Gradle is a build automation tool used in Android development to manage dependencies, automate the build process and configure project settings.

iv) API:-

An API is a set of protocols, tools and definitions that allow one software application to interact with another.

v) Local Storage:-

Local storage in mobile app refers to the mechanisms by which data is stored directly on the device, allowing the app to presist data between sessions.

uses,

SQL lite

in flutter we use only SQL flite.
